GRADES 7-8-9**

**PROGRAM RATIONALE AND
PREAMBLE**

Science provides the ability to help people to understand the natural world and to use this understanding to improve the human condition. It is a discipline that is constantly changing and that is constantly being applied to the world around us. It is a discipline that is constantly being applied to the world around us. It is a discipline that is constantly being applied to the world around us.

To ensure scientific literacy, students must develop a strong knowledge of science and its applications in the natural world. This includes understanding the scientific process, the scientific method, and the scientific community. It also includes understanding the role of science in society and the environment. The program is designed to provide students with the knowledge and skills to become scientifically literate citizens.

Program Goals

The science program is designed to provide students with the opportunity to develop a strong understanding of the natural world and to use this understanding to improve the human condition. It is a discipline that is constantly changing and that is constantly being applied to the world around us.

Students learning objectives within the science program provide students with opportunities to explore, understand, and appreciate the natural world and its complexity, and to apply this understanding to the world around them.

Goals

The following goals for Science grade 7-8-9 are designed to provide students with the opportunity to develop a strong understanding of the natural world and to use this understanding to improve the human condition.

- Students will understand the scientific process and the scientific method.
- Students will understand the role of science in society and the environment.
- Students will understand the scientific community and the role of scientists.
