# PUBLIC NOTICE

---

**March 11, 2022**

Rover Metals Corp. (“Rover”) will be commencing its late-winter exploration drill program at the Cabin Lake Project next week (the week of March 14th) as follows:

1. Exploration supplies and the drill rig will be mobilized to site from the Yellowknife airport on Tuesday March 15, 2022;
2. Exploration drilling is expected to commence on Thursday March 17th;
3. The exploration program is expected to last a minimum of four to five weeks;
4. The exploration crew will be residing in camp. Due to COVID-19, and required COVID-19 protocols, this will be a closed camp for this winter’s exploration program.

### *COVID-19 Protocols*

There will be very limited contact between the Yellowknife-based personnel, or Rover’s employees, and the local community. The camp at Cabin Lake, and any worksite on the property will not be open and accessible to off-site NT citizens as a result of Company elected COVID-19 health and safety protocols measures. There will be a single point of contact between the field exploration geologist and the workers from Behchok̓ (Rae-Edzo) working at site on brushing and trail clearing work. Community laborers will be working outdoors, and all health protocols (physical distancing) will be observed in their interactions with the on-site field geologist. Community laborers will not be staying overnight in the camp.

Should you require any additional information, please contact Judson Culter, CEO, Rover Metals Corp. at [info@rovermetals.com](mailto:info@rovermetals.com).
